RESEARCH EXPERIENCE

Research Assistant

September 2024 – Present

Emory University School of Medicine, Atlanta GA

- Contributed to translational research in Dr. Judith Fridovich-Keil's lab evaluating enzymatic rescue and phenotypic outcomes in a rat model of classic galactosemia.
- Quantified treatment efficacy using phenotypic outcomes (growth deficiency, cataracts) and nonparametric and categorical statistical tests (t-test, Wilcoxon, chi-square, Fisher's exact).
- Performed multi-tissue metabolic analyses to assess genotype- and treatment-dependent differences and their correlation with GALT enzyme activity.
- Processed and modeled longitudinal and cross-sectional clinical data from 500+ patients in R using LMMs, MMRMs, and categorical analyses to study early childhood developmental milestones.

Research Assistant

January 2026 – Present

Winship Cancer Institute of Emory University, Atlanta GA

- Analyzed longitudinal survival and clinical trial data from 35 PDAC patients (77 observations) to evaluate immune and cytokine changes across baseline and post-treatment timepoints.
- Integrated 71 cytokine/growth factor biomarkers (IL-6, TNF- α , etc.) with clinical outcomes to assess inflammatory signaling associated with disease progression and therapy response.
- Profiled immune cell composition using high-dimensional CyTOF, myTOF, and mIHC biopsy data across T cell and innate-like lymphocyte populations.
- Conducted multi-omic analyses linking CHIP mutation status to immune suppression phenotypes, including MDSC expansion and T cell exhaustion.
- Built reproducible statistical workflows to relate immune phenotypes, cytokine dynamics, and genomic alterations to therapeutic response in a Phase 1b/Phase 2 immunotherapy trial.

PROFESSIONAL & WORK EXPERIENCE

Data Analyst

February 2026 – Present

Invest Atlanta, Atlanta GA

- Applied geospatial and demographic data to evaluate resident proximity to fresh food access locations across Atlanta.
- Compared proximity-based methodologies to identify underserved neighborhoods and assess progress toward the city's ½-mile fresh food access goal.
- Generated policy-facing visualizations and summaries to support data-driven evaluation of municipal food access initiatives.

Medical Research Intern

August 2025 – January 2026

Berkeley Pharma Tech, Remote

- Led a 4-member cross-university research team on neuromodulation-based treatments for treatment-resistant depression (TRD), coordinating meetings, delegating tasks, and integrating all section contributions into a scientific manuscript.
- Authored core sections on depression pathophysiology and rationale for circuit-level interventions.
- Synthesized literature on pharmacologic therapies (SSRIs/SNRIs) and non-invasive neuromodulation (ECT, rTMS), incorporating clinical trial and FDA prescribing information.
- Organized literature findings and led the finalization and submission of the manuscript, ensuring accurate AMA citation formatting and full compliance with journal submission requirements.

AI Trainer

July 2025 – August 2025

Handshake AI, Remote

- Designed and stress-tested domain-specific prompts to benchmark large language model performance in biomedical research tasks.
- Assessed model outputs for scientific accuracy, interpretability, and technical depth across specialized biomedical subfields.
- Curated and synthesized primary literature to inform prompt design, evaluation criteria, and expert-grounded benchmarking.

PROFESSIONAL COMPETENCIES

Languages: English (Bilingual), Mandarin Chinese (Bilingual), Spanish, German

Programming: R (5 years), Python (4 years), MATLAB, SQL, Java, LaTeX

Productivity: Word, Excel, PowerPoint, Docs, Sheets, Slides

Platform: Git & GitHub, VS Code, Jupyter Notebooks, ArcGIS, Anaconda, MySQL
